

# **1kW grid-connected inverter manufacturer**

## Overview

---

What is an on-grid 5kW inverter?

An on-grid 5kw inverter is easy to maintain and converts the direct current to alternating current for powering domestic appliances and even commercial equipment. These solar inverters typically offer high efficiency of around 93% to 96%. Also, the warranty period of these inverters is around 5-10 years.

What are grid-connected inverters?

Grid-connected inverters (GCI) are used to feed power from renewable energy distributed generators into the grid\*. They are widely used for this purpose. Repetitive control (RC) enables such inverters to inject high quality fundamental-frequency sinusoidal currents into the grid.

What is a 10kW on-grid inverter?

A 10kW on-grid inverter is specially designed to add extra electricity to your system. It generates enough electricity to meet your daytime needs and saves excess electricity for later use at nighttime.

How do on-grid inverters work?

Our on-grid inverters are usually connected to a utility grid and function by matching their frequency with the utility grid sine wave. They are designed to spontaneously shut down in the event of a power cut for safety reasons. Hence, they stop supplying power during an outage.

What are Waaree's next generation Smart on-grid inverters?

Waaree's Next Generation Smart on-grid Inverters deliver industry-leading efficiency across a comprehensive range from 1kW to 136kW. Waaree inverters are backed by an exceptional 8-year warranty for complete peace of mind.

What is a solar inverter?

An inverter is one of the most significant components in the solar system. These inverters have evolved and become smart and intelligent to perform functions such as data monitoring, advanced utility controls, etc. Our on-grid inverters are usually connected to a utility grid and function by matching their frequency with the utility grid sine wave.
