

Cyprus Communications Green Base Station Equipment Processing Factory

Overview

What is a green base station solution?

The green base station solution involves base station system architecture, base station form, power saving technologies, and application of green technologies. Using SDR-based architecture and distributed base stations is a different approach to traditional multiband multimode network construction.

Does Cyprus have a good digital infrastructure?

Cyprus has made significant progress in recent years regarding its digital infrastructure, both in terms of fixed and mobile network coverage, as well as the penetration of broadband services, with substantial investments from both the telecommunications providers and the state.

Why should Cyprus be a regional data gateway?

At the same time, it is a decisive factor in establishing Cyprus as a regional data gateway in the Eastern Mediterranean region and in attracting high-tech companies.

What should a base station do in a wireless communications network?

In a wireless communications network, the base station should maintain high-quality coverage. It should also have the potential for upgrade or evolution. As network traffic increases, power consumption increases proportionally to the number of base stations. However, reducing the number of base stations may degrade network quality.

What is the Cyprus Broadband Plan 2021-2025?

The Cyprus Broadband Plan 2021-2025 serves as the roadmap for bridging the digital divide in terms of connectivity and transitioning the country towards a Gigabit Society. Our priority is to ensure access to ultra-high-speed connectivity (Gigabit) for all citizens without exception.

Cyprus Communications Green Base Station Equipment Processing I

What is a Base Station?

The electromagnetic waves emitted by base stations and mobile phones are like air, filling us all around. Everyone knows mobile phones, ...
