How much does a charging pile cost?

The price of charging piles varies greatly, ranging from hundreds to thousands of RMB, causing the price difference. The most important thing is the difference in power. The price of 11KW is about 3000 or more, the price of 7KW is 1500-2500, and 3.5 The portable price of KW is under 1500.

What is an EV charging pile?

An EV charger or charging pile is a unit intended for supplying electric energy to an electric vehicle that requires charging in order to increase its stored energy. They act as intermediaries between the power grid and an electric vehicle (EV), controlling the current and voltage supply to ensure that charging is done efficiently and safely.

How does a charging pile work?

People can swipe a specific charging card on the human-computer interaction interface provided by the charging pile to carry out corresponding operations such as charging mode, charging time, cost data printing, etc. The display screen of charging pile can display charging amount, cost, charging time and other data.

What is the difference between charging pile and charging station?

Although "charging pile" and "charging station" are occasionally used interchangeably, they describe different ideas. A charging pile is the basic component of an electric power infrastructure that allows electricity to flow to the vehicle.

Why is it important to maintain the charging pile?

The importance of maintaining charging piles lies in the fact that influences by the changeable environment and ageing inner parts can cause various faults. Regular examination and maintenance are necessary during both product

storage and using processes.

What is a public charging pile?

Public charging piles are purchased by public service organizations such as government for use by any electric vehicle owner, such as public parking lots.
