

Fixing photovoltaic panels on the roof of an industrial plant

Overview

How do I implement an industrial solar panel system?

Implementing an industrial solar panel system requires careful planning, precise installation, and ongoing maintenance. It is crucial to partner with a trusted industrial and commercial solar solutions provider that understands the unique requirements and complexities of industrial solar projects.

Can a flat roof be used as a PV system?

Although large, flat roofs on industrial and commercial buildings present a massive opportunity for PV systems, building owners/managers must address two broad issues to ensure the panels and associated components are installed correctly and will operate safely in a variety of conditions:.

How are rooftop PV systems mounted?

There are two primary mounting methods for PV systems on commercial building roofs: Ballasted Racking – Uses heavy weights, typically concrete blocks, to anchor PV systems on a flat roof. Some hybrid-ballasted systems use a combination of ballast and roof penetrating anchors to fasten the system to the roof.

Who should install a rooftop PV system?

All rooftop PV systems should be installed by reputable solar installers. American Board of Certified Energy Practitioners Commercial Rooftop PV System, Alcatraz Island (NABCEP). No.

Should a roof be replaced before installing a PV system?

Typically if the roof will need to be replaced, building owners are encouraged

to replace it prior to installing the PV system. However, TPO contracts can be designed to include the temporary removal of the PV system for roof replacement at a later date.

Do I need to replace my roof before installing a solar system?

Before installing a PV system, the solar installer will conduct a roof assessment and determine if the roof will need to be replaced during the life of the PV system. Typically if the roof will need to be replaced, building owners are encouraged to replace it prior to installing the PV system.
