

# Germany s energy storage battery capacity

#### **Overview**

In 2024, the number, output, and storage capacity of battery systems in Germany grew by around 50% compared to the previous year. At the beginning of January 2025, Germany reported a total of 18.2 GWh in stationary battery storage systems. How many battery storage systems are there in Germany?

According to preliminary numbers from the German Solar Industry Association (BSW Solar), there were 1.8 billion installed battery storage systems in Germany at the end of last year. They had a capacity 19 gigawatt hours (GWh), enough to cover the daily electricity consumption of two million two-person households.

How many battery storage systems were installed in Germany in 2024?

Almost 600,000 new stationary battery storage systems were installed across Germany in 2024, increasing the country's storage capacity by 50 percent year-on-year, according to preliminary data from the German Solar Industry Association (BSW Solar).

What if a battery storage project was approved in Germany?

If only half of these projects were approved, they would store enough energy to power 30 million German households for one day. Battery storage is needed to supplement the country's rapid rollout of renewable energy installations, which reached a new record share in electricity production of 55 percent in 2024.

Why is Germany launching a solar storage system?

The German government is planning further measures to make the integration of storage systems smooth and effective. This is a decisive step towards driving forward the expansion of renewable energies in an economic and system-friendly manner." Home solar power units drove a massive rise in storage capacity in Germany last year.

How many stationary battery storage units were installed last year?

Almost 600,000 new stationary battery storage units were installed last year. That amounted to an annual increase of just under 50 percent. There were 15.4 GWh of capacity installed in private homes, much of it to use self-generated photovoltaic electricity.

How many battery storage systems are there?

This brings the total number of installed battery storage systems up to 1.8 million, with a total capacity of 19 gigawatt hours (GWh), the equivalent of the daily electricity consumption of two million two-person households, said the interest group.
