

# How do companies configure energy storage products

#### **Overview**

What is the design of an energy storage system?

The design of an energy storage system includes proprietary processes and equipment configurations. These designs and software programs are crucial to the system and should be protected from theft, misappropriation, or loss of exclusive rights.

Should a utility deploy an energy storage system?

A utility's decision to deploy an energy storage system should be evaluated against alternative solutions, such as traditional infrastructure upgrades/expansions and competing distributed generation-based alternatives. However, the passage does not directly answer whether a utility should deploy an energy storage system.

Is energy storage a new concept?

Energy storage is not a new concept for energy end-users or utilities. Aside from use of batteries for consumer electronics, utilities have been using batteries in the form of device-specific UPSs, facility wide UPSs, and even as part of emergency back-up systems, often in conjunction with on-site back-up generation.

Why should you invest in energy storage solutions?

Solutions that can support you improving your energy storage operations, empower your workforce with advanced tools and provide actionable insights and visualization to enhance efficiency and help you achieve your energy storage goals. Technologies to help expand the supply of sustainable aviation fuel.

Why should you choose Honeywell energy storage solutions?

Discover how Honeywell's energy storage solutions can help provide technology, software and services to better optimize operations, support

energy efficiency goals and enable cost savings. 40+ years of continued innovation in energy and control systems and SCADA for power industry.

Why should utilities rethink their energy management strategies?

In many markets, the grid infrastructure is under strain – both from an increasing demand for electricity 1 and extreme weather events causing outages. 2 This requires utilities – as well as commercial and industrial organizations – to rethink their energy management strategies.
