

# **Is it okay to use a hollow roof as a photovoltaic panel**

## Overview

---

### Can a roof house solar panels?

Having a roof that is suitable for solar is 100% a dealbreaker. Therefore, homeowners should confirm whether their roof can house solar panels by calculating their system size and measuring how much roof space they have to work with.

### How do I choose a roof for solar?

It's important to have a large enough roof to fit the amount of solar panels you need. Traditional asphalt and metal roofs are the best materials for solar projects. Solar installations are riskier on tile or wooden roofs. If you do not have a roof suitable for solar, alternatives to roof solar include ground-mounted and community solar.

### Can you install solar panels on a flat roof?

Ballast systems are simply a weighted racking setup that holds solar panels in place. If you need to drill into your flat roof to install solar panels, don't worry – your solar installer will ensure that the holes they drill are as small as possible and sealed correctly to avoid roof damage or leaking. Can you install solar panels on wooden roofs?

.

### Is your roof good for solar?

There are plenty of benefits to going solar for homeowners. However, it's not always feasible for everyone. First and foremost – having a roof that can support solar panels is mandatory. So, how can you tell if your roof is good for solar?

This can easily be determined by asking the following four questions: How many solar panels do I need?

Do you need a roof check before installing solar panels?

A detailed roof check is needed before installing solar panels. Look at the roof's structure, age, and condition. Fix any issues to ensure it can hold the solar system. Discover essential roof requirements for solar panels. Learn about pitch, load capacity, and materials to ensure your home is ready for a solar energy system.

Can you put a solar panel on a thatched roof?

Thatched roofs are not suitable for solar panels. There's no mounting system designed for thatch, which wouldn't be ventilated well enough underneath the panels and so would rot. And given that thatched roofs already present a fire risk, putting an electrical system on top wouldn't be sensible!
