

Kyrgyzstan and energy storage projects

Overview

How has Kyrgyzstan improved energy statistics data collection?

Kyrgyzstan has achieved great progress in strengthening energy statistics data collection through the INOGATE programme: the National Statistical Committee has submitted joint annual questionnaires to the IEA since 2014, and for 2015 the breakdown of natural gas consumption by sector had improved.

Who has power in Kyrgyzstan?

Executive power in Kyrgyzstan lies with the government, its subordinate ministries, state committees, administrative agencies and local administrations. In the energy sector, the government: Grants and transfers property rights, and rights for use of water, minerals and other energy resources.

How much CO₂ does Kyrgyzstan produce?

higher than the global average. The Kyrgyzstan energy sector contributes to roughly 60%, 9.1 MT of CO₂, of its total GHG emissions, where the residential energy consumption and the production of heat & electricity account for over 70.

What resources does Kyrgyzstan have?

Its plentiful water resources make hydropower the most important energy source; it also has significant deposits of coal, but oil and natural gas resources are marginal. Kyrgyzstan gained independence in 1991 with the dissolution of the Former Soviet Union, but the country subsequently struggled economically.

Why is Kyrgyzstan's energy sector deteriorating?

in Kyrgyzstan. Deteriorating infrastructure The deterioration of energy sector infrastructure coupled with the financial crisis in the energy system will

eventually lead either to a significant decrease in the quality of produ.

What is Kyrgyzstan's energy saving potential?

Kyrgyzstan's energy saving potential is significant: it is estimated that rehabilitation and modernisation can save up to 25% of electricity and 15% of heat.
