

# Malta s energy storage power exports to

#### **Overview**

What can Malta do about fossil fuels?

ance on fossil fuels. Accelerate the deployment of renewables, promoting and enabling investments in wind and solar energy, including in floating offshore energy, further upgrading Malta's electricity transmission and distribution grids, and creating incentives for electricity storage to supply firm, flexible and f.

Why does Malta need solar power?

Increases in energy costs worldwide have given new impetus to this work, since Malta imports nearly all its energy. The government continues to explore additional possibilities for solar power generation and employing other alternative energy sources such as wind power (see also Waste section for related opportunities).

Why does Malta need battery storage?

Malta also seeks to secure battery storage to aid with problems of energy intermittency that comes with widescale adoption of renewable energy sources like solar and wind.

Can US energy suppliers find opportunities in Malta?

U.S. suppliers of renewable solutions may therefore find opportunities in Malta. Further, this gives rise to opportunities for U.S. energy storage technologies and batteries, which assist in flattening the demand curve and smoothing out Malta's energy supply.

How much electricity does Malta produce a year?

Total electricity supply in Malta by type and year Electricity production from power plants registered an increase of 1.5 per cent when compared to previous year amounting to 2,026.0 GWh (Table 3). Energy harvesting from renewable sources registered an increase of 7.3 per cent, reaching 318.6 GWh

#### What is energy in Malta?

Energy in Malta describes energy production, consumption and import in Malta. Malta has no domestic resource of fossil fuels and no gas distribution network, and relies overwhelmingly on imports of fossil fuels and electricity to cover its energy needs.
