

Serbia local energy storage battery manufacturer

Overview

ElevenEs, a European leader in Lithium Iron Phosphate (LFP) batteries, manufactures the EDGE cobalt- and nickel-free cells in Serbia. Founded in 2021, their sustainable, high-performance batteries serve electric vehicles and large-scale energy storage, backed by Al Pack Group and EIT InnoEnergy. Where are LFP batteries made in Serbia?

Serbian battery developer ElevenEs is finalising a project for the construction of a mega factory that will produce Lithium Iron Phosphate (LFP) batteries in the country's northern city of Subotica, CEO Nemanja Mikac told SeeNews.

Could Serbia be a technological leader in LFP battery production?

The Republic of Serbia could be a technological leader in LFP battery production in the whole world outside of China, because it has a chance to become the first in Europe to mass-produce this type of battery. The signed Memorandum with the European Union envisages a serious focus on the ecosystem of electric vehicles and battery production.

What is the economic potential of a supply chain in Serbia?

The economic and market potential of this type of business model and supply chain in Serbia is enormous. We could expect about 10-12 billion euros of new income for Serbia and about 20 thousand new jobs in our country, as well as a consequent serious growth and development of employees in the industry.

How long will it take to localize and scale production in Serbia?

Our plan is to localize and scale production in Serbia in the next seven to eight years. To slowly bring in our partners and to participate in the creation of the supply chain in Serbia. That would mean about three to five billion euros per year, for our supply chain alone, and about 5,000 new jobs in our company.
